Math 1131 Week 14 Worksheet

Name: \_\_\_\_\_

Discussion Section:

Solutions should show all of your work, not just a single final answer.

## 6.2: Volumes

1. Set up, but **do not evaluate**, a definite integral for the volume of the solid obtained by rotating the region bounded by the given curves about the specified line.

(a) y = 3 - x, y = 0, x = 1, x = 2; about the *x*-axis

(b)  $y = x^4 - 2x^2 + 1$ ,  $y = 2 - 2x^2$ ; about the *x*-axis

(c)  $y^2 = x$ , x = 2y; about the *y*-axis

- 2. A solid region has a circular base of radius 3 whose cross-sections perpendicular to the x-axis are equilateral triangles.
  - (a) Placing the circular base in the plane so it's centered at the origin, determine the side length of the cross-sectional triangle that passes through (x, 0), for  $-3 \le x \le 3$ . (Your final answer will depend on x.) Draw a clear diagram in your solution.

(b) Set up, but **do not evaluate**, an integral equal to the volume of this solid region. Hint: the area of an equilateral triangle with side length s is  $\frac{s^2}{4}\sqrt{3}$ .
