## PRACTICE PROBLEMS FOR EXAM 4

Sections Covered: 5.2-5.5 and 6.1-6.2, plus some previous material

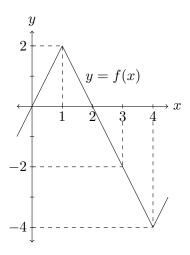

## Read This First!

- These practice problems are NOT sufficient review for the exam and do not represent the exact length of the exam. You should also use other resources, such as the textbook, worksheets, and Paul's Online notes to find further practice problems on topics that you have struggled with (or that you have trouble with on the practice problem set).
- Use these practice problems, in addition to other course materials, as a guide to determine what you need to study more deeply.
- The exam will contain some multiple choice questions as well as short-answer questions. Short answer questions may be similar to questions found in lecture videos, live class activities, worksheets, and/or WebAsisgn. When studying, make sure you are able to fully justify your answers and reasoning to prepare for the short-answer portion of the exam.
- The exam is designed to take about 50 minutes, but you will have the full University-scheduled 2-hour Final Exam period to take the exam (and to take the Integrals Skills Quiz, if you need to).
- Please read each question carefully. For multiple choice questions, there is only one correct choice for each answer.
- On the exam, please carefully check all of your final answers. The submitted letter answers are the **ONLY** place that counts as your official answers for multiple-choice questions.
- You may **NOT** use a calculator or any other references on the exam, and **you are expected** to work independently.
