Math 1131 Week 14 Worksheet

Name: _____

Discussion Section:

Solutions should show all of your work, not just a single final answer.

6.2: Volumes

1. Set up, but **do not evaluate**, a definite integral for the volume of the solid obtained by rotating the region bounded by the given curves about the specified line.

(a) y = 3 - x, y = 0, x = 1, x = 2; about the *x*-axis

(b) $y = x^4 - 2x^2 + 1$, $y = 2 - 2x^2$; about the *x*-axis

(c) $y^2 = x$, x = 2y; about the *y*-axis

- 2. A solid region has a circular base of radius 3 whose cross-sections perpendicular to the x-axis are equilateral triangles.
 - (a) Placing the circular base in the plane so it's centered at the origin, determine the side length of the cross-sectional triangle that passes through (x, 0), for $-3 \le x \le 3$. (Your final answer will depend on x.) Draw a clear diagram in your solution.

(b) Set up, but **do not evaluate**, an integral equal to the volume of this solid region. Hint: the area of an equilateral triangle with side length s is $\frac{s^2}{4}\sqrt{3}$. Answers to Selected Problems:

1. (a)
$$\int_{1}^{2} \pi ((3-x)^{2}) dx$$

(b) $\int_{-1}^{1} \pi ((2-2x^{2})^{2} - (x^{4} - 2x^{2} + 1)^{2}) dx$
(c) $\int_{0}^{2} \pi (4y^{2} - y^{4}) dy$

2. (a)
$$2\sqrt{9-x^2}$$

(b) $\int_{-3}^3 \sqrt{3}(9-x^2) dx$
